Ypsomed and ten23 health expand integrated offering for YpsoDose large volume wearable injector with new device assembly capability

Burgdorf/Basel/Visp, Switzerland 29.09.2026, 7 a.m. – Ypsomed and ten23 health[1] today announced the next milestone in their strategic partnership for the YpsoDose wearable injector. By installing dedicated device assembly capabilities for Ypsomed's large-volume wearable injector, ten23 health is further expanding the integrated development and manufacturing offering established by the two companies. The new equipment is now finalizing qualification.

The milestone builds on the collaboration first announced in April 2024, when ten23 health and Ypsomed joined forces to offer pharmaceutical customers a fully integrated solution for the YpsoDose platform, designed to support the development and commercialization of drug-device combination products with YpsoDose. The offering combines 10 mL glass cartridges, Ypsomed's large-volume wearable injector technology YpsoDose, and ten23's formulation, sterile filling, analytical testing and quality control services. By bringing these capabilities together, the partnership aims to simplify the path from drug product development to a commercially ready YpsoDose combination product.

Since then, ten23 health has implemented sterile filling for the 10 mL glass cartridges used with YpsoDose on both its development filling line, which can be used for process development and to generate samples for stability testing, design verification and other purposes, as well as on its Good Manufacturing Practice (GMP) clinical and smaller-scale commercial filling line.

With the assembly capability now being implemented, the strategic partnership of Ypsomed and ten23 health is extending beyond drug product manufacturing and testing to include the assembly of the final drug-device combination – bringing an additional step of the supply chain under one roof. This further expands the range of services available to pharmaceutical customers developing combination products with YpsoDose. For pharmaceutical customers, this means access to an integrated supply chain solution, with fewer technical transfers, and fewer partners to coordinate.

"We are proud to have advanced the access and providing an embedded supply chain solution for customers, in partnership with Ypsomed, for this innovative large-scale subcutaneous device – across development, GMP manufacturing and filling, analytical testing and quality control, and now assembly of the final combination product", says Prof. Dr. Hanns-Christian Mahler, Chief Enablement Officer at ten23 health.

“Our goal with YpsoDose is not only to provide pharmaceutical companies with a proven large-volume injection platform, but also to make the path toward a commercial combination product as efficient as possible. Adding assembly to our integrated offering with ten23 health brings us another step closer to that goal and helps simplify the path from filled cartridge to commercially ready device," says Reto Jost, Category Lead Large Volume Injectors at Ypsomed.
